

SSM 53183 2024 Bronco - TRM Unable To Program Using FDRS Version 42.5.6

Some 2024 Bronco vehicles may be unable to program the trailer brake module (TRM) during installation of the dealer installed option/accessory "Trailer Tow Kit". This may be due to an issue with the Ford Diagnosis and Repair System (FDRS) software version 42.5.6. To correct this condition, download and install FDRS version 42.5.8 or later and retry reprogramming the TRM module.
