Accessory Protocol Interface Module- SYNC
SU 6.14.0

Software Update 6.14.0

Software updates are designed to help make your vehicle better over time.

1

SYNC Updates

- While your center display is receiving the latest software update, you may see the message “Some display features may be temporarily unavailable.”
- This is normal and part of a brief process that helps bring the latest system improvements to your vehicle.
- After the update, your vehicle will notify you while SYNC is updating.

Step up to the mic, please

For this latest Ford Power-Up software update, we listened to your feedback and made it easier for you to continue to share your experiences by recording and sending voice feedback from the convenience of your vehicle.

Prior to this update, access for this feature was in the Settings-General menu. But now it’s been moved to the App screen and will be available whenever your vehicle is activated in FordPass®. Look for the new Record Feedback microphone icon — and continue to let us know what you really think. Available in the U.S. only.
