DreamDrive

New feature: Curb Rash Alert

Curb Rash Alert can notify you if it detects you are at risk of scraping a wheel against a curb while parking. When driving below 10 km/hr, this feature provides the driver with the distance to the curb while highlighting the predicted path of the wheel, giving an audible alert if the system detects a risk of scraping a wheel. The driver remains responsible for maneuvering the vehicle, including steering, braking, and monitoring the surroundings to avoid damage. Curb Rash Alert is automatically deactivated at night or in low light conditions. Refer to your Owner's Manual for additional information.

To better fit the continuing enhancements to DreamDrive Pro, the Highway Assist feature will now be called Drive Assist.

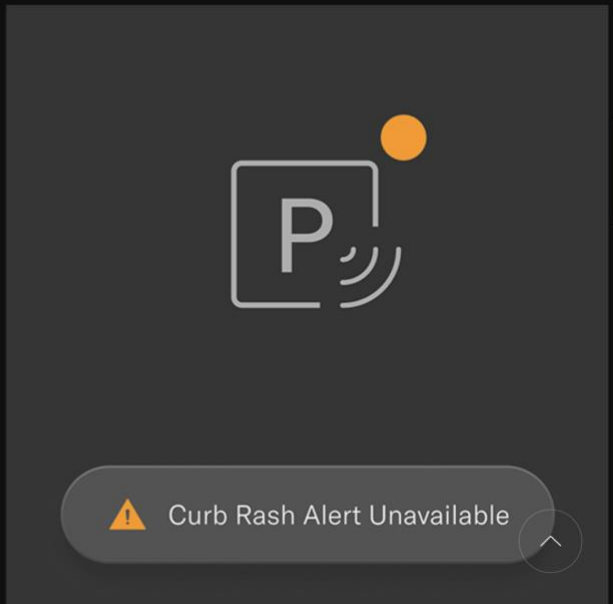

DreamDrive

Curb Rash Alert, which was introduced in a recent software update, now shows a notification on-screen if it is deactivated due to low-light, rain, or snow conditions.

To better fit the continuing enhancements to DreamDrive Pro, the Highway Assist feature will now be called Drive Assist.

The Lane Change Assist feature in DreamDrive Pro is activated using the turn signal. With this update, the DreamDrive settings menu enables you to change how long the turn signal needs to be held to activate the feature. The default is "Long Activation."

Improved the performance of the surround view cameras.

Lucid Assistant

Lucid Assistant is now able to show nearby points of interest or to make the nearest one the destination in your navigation system. For example, "Show me nearby Electrify America chargers" will display the results on the screen, while "Take me to nearest Electrify America charger" will begin turn-by-turn navigation.

We have made improvements so that Lucid Assistant better understands Spanish.

You can now use Lucid Assistant to call your contacts while Apple CarPlay® is connected.

Lucid Assistant

Lucid Assistant is now able to show nearby points of interest or to make the nearest one the destination in your navigation system. For example, "Show me nearby coffee shops" will display the results on the screen, while "Take me to the nearest coffee shop" will begin turn-by-turn navigation.

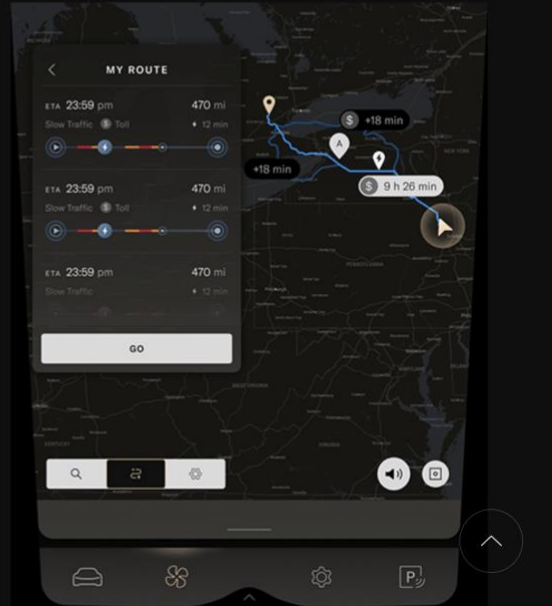

You can now use Lucid Assistant to call your contacts while Apple CarPlay® is connected.

Navigation

The navigation system will now show not just the estimate for remaining charge at your destination – it will also display an estimated remaining charge for a round trip to and from your beginning point when planning a route.

Navigation will estimate and display your vehicle's remaining battery charge for a round trip to and from your beginning point when planning a route.

Driving & Operating

We have improved clarity around Traction Control/Stability Control notifications.

We have made enhancements to the way we handle drive-unit faults, which will expand the driver's options for responding.

Charging

We have improved the overall error notifications for Charging features, so when a problem is encountered, the error notification will be more specific to the problem seen.

Sound System

We have refined the audio system, improving tone controls to allow further bass reduction. Additionally, we have enhanced the center channel tuning during Dolby Atmos playback, improving vocal reproduction.

The sound of the turn signals inside the car are now synchronized with the direction of the turn signal, so the left turn signal sound will come from the left side of the car, and the right signal sound from the right side.
