

Broken screws and misadjusted bell stop causing wall separation repair

Remove screws holding the dinette seat to the wall.

Open slide and go underneath to access roombar. Screw 3" self tapping lags through the opening of the roombar, pulling the wall tight. See pictures.

After the wall is tight resecure dinette to the wall using new holes making sure to hit the backer inside the wall by using a magnet to find EGS backer.

Next look at the bell stop to make sure it is adjusted properly, the bell should stop the slide when at proper compression.

This repair should take 45 minutes
