**Technical Background**

Information only document, relating to the replacement of Evaporative Emissions System components e.g. EVAP canister and Leak Detection Pump (DMTL, ATLD etc.).

**Production Solution**

Not applicable.

**Service**

When replacing Evaporative Emissions System components, it is not always necessary to replace the entire EVAP canister system as a complete assembly, if the failed components are available as standalone replacement parts.

If technical diagnosis has determined that only a single component has failed (e.g. the EVAP canister or the Leak Detection Pump), check whether this part may be replaced separately. In the example Figure 1 shown below, the canister can be replaced separately, and the original Leak Detection Pump and air filter assembly may be re-used with the new replacement canister. The opposite also applies, where the Leak Detection Pump could be exchanged while re-using the original EVAP canister.

Figure 1. Example: ETKA indicates that the EVAP Canister is available as a separate component within the complete assembly.

If it has been determined through technical diagnosis that the entire assembly must be replaced, or if the parts are not separately available per current ETKA information, then this bulletin does not apply.

**NOTICE**

All part and service references provided in this bulletin are subject to change and/or removal. Always refer to your Parts Dept., ETKA, and the corresponding repair manual for accurate part and repair information!

**Warranty**

Information only.

## Required Parts and Tools

Not applicable.
