

SSM 53453 2020-2025 F53 Motorhome - Front Jounce Bumpers Always In Contact With Suspension

2020-2025 F53 Motorhome vehicles with a gross vehicle weight rating (GVWR) of 20,500-26,000 lbs. are equipped with front jounce bumpers that are designed to make constant contact with the front suspension while the wheels are supporting the weight of the vehicle, and the vehicle has a complete body installed. This is a normal condition of the front suspension and does not indicate that the vehicle is overloaded or damaged. These front jounce bumpers (service base part number 3020) are an active part of the front suspension. During suspension travel, they provide incremental dampening which improves ride quality and cornering performance. For more information, refer to the Body Builder Layout Book (BBLB) for the 2025 F53 Motorhome, F59 Commercial Stripped Chassis located on the www.FordPro.com website > Resources > Body Builder Advisory Service (BBAS) > Publications.
