

SSM 53477 2025 Bronco - Window Short Drop Feature

2025 Bronco vehicles are equipped with an added strategy within the short drop feature which will activate anytime the vehicle is unlocked using the remote keyless entry (RKE), accessory keyless entry keypad, or the interior door unlock switch. Once all doors are closed or the vehicle is locked, the windows will automatically return to the fully closed position, one at a time, in a staggered pattern. This added strategy within the short drop feature is exclusive to the 2025 Bronco and is not available to be added to older model Bronco vehicles.
