

2023-2024 MY Escape
Anti-lock brake system - ABS
ABS 24.80.6

Priority Update - Parking Brake

Anti-Lock Brake System Control Module

ABS-24.80.6

1

Enhanced Brake Release

- Your parking brake releases faster when you shift to reverse, helping to make your transitions smoother and more efficient.
- Your vehicle's braking alerts have also been refined.
- After the update, some settings may be reset, potentially causing a check engine light to appear in your vehicle. The check engine light has no impact to your vehicle and will clear after a few drives. No further action is required at this time.
