

## Document Information

**Location:** Powertrain - Engine

**Topic:** McLaren Artura – Oil Level Diagnosis

**Condition:** PDI Oil Level Check

**Diagnostic Trouble Codes:** N/A

## Measure

When faced with an oil level concern (high oil level or low oil level), start by confirming oil level with 3 consecutive oil level checks using the oil level check procedure defined in the owner's manual and SIS.

If issue persists, complete a full oil drain of the system as per MSP Drain/fill Engine Oil (do not remove and replace the oil filter in this case). Measure the oil quantity drained from the engine and oil tank separately.

**Care Point:** Please record drained and filled oil quantities on the TR or Job Card.

**Care Point:** Please raise a Technical Request if the total oil drained is less than 6 litres.

Refill the vehicle using the same procedure as stated above and record the quantity of oil needed to achieve the correct oil level.

Confirm correct oil level with 3 consecutive oil level checks using the oil level check procedure defined in the owner's manual and MSP.
