# Rapid Update 760 TEMPORARY SUSPENSION

DATE: April 8, 2025

Effective Immediately: Rapid Update 760 is suspended until further notice due to the potential occurrence of DTC P061B. This diagnostic trouble code may appear when torque command limits are exceeded, triggering the "Turtle Mode" warning lamp. This results in limited vehicle performance, which can be easily restored with a key cycle (Key OFF – Key ON).

There is no impact to vehicle safety associated with this issue.

We are actively working on a new software release to resolve the condition and will make it available as soon as possible.

All open, unsubmitted claims related to this update will be handled promptly through your ad hoc reports.

Please contact your RAM if you have any questions

Thank you for your kind attention.
