

Detroit Connect Upfront Service Extension

Detroit Connect – Upfront Service Extension

What is it?

Detroit Connect is a suite of connected vehicle services designed to give insights into a fleet's vehicle health. Detroit Connect offers upfront subscription extensions of 1-4 years.

Why is it important?

Detroit Connect offers real-time vehicle and safety system health monitoring via Virtual Technician. This service can alert maintenance teams to faults and potential downtime, as well as increase fleet visibility and transparency.

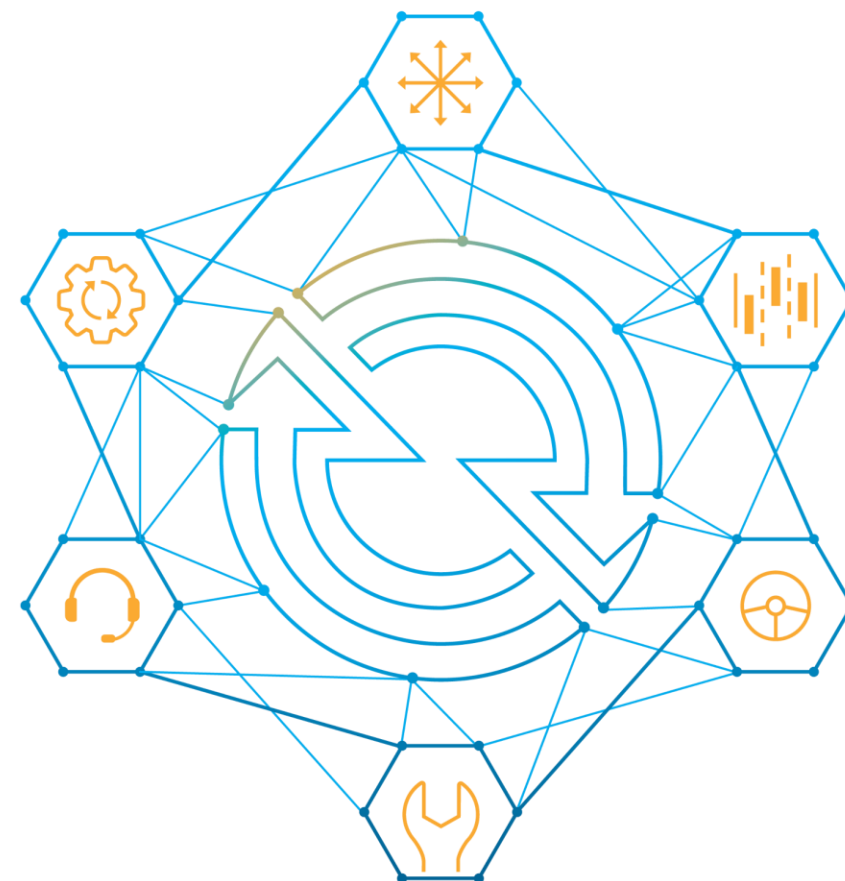

- The cost of the upfront extension at the time of a new truck purchase can be capitalized, financed, and depreciated as part of the purchase price.
- The cost is fixed for the length of the customer's trade cycle.
- The customer will continue to receive uninterrupted telematics services.

Dealer benefits

With Virtual Technician dealers get valuable information on the health of a truck that can improve parts and service revenue for a longer period of the life of the truck.

Key Features:

- Virtual Technician
- Track & Trace (GPS tracking)
- Detroit Diesel Engine Control (DDEC) reports
- Base Remote Parameter Updates (7 engine parameters)

Detroit Connect - Upfront Service Extension
