

FRED SUBMISSION BEST PRACTICES

- There have been several FRED submissions for concerns of water ingress on an electrical component within the car.
- If there is a leaking windshield that caused the water ingress on the electrical component, this would be a scenario of the windshield being the causal part and the electrical component being related damage.
- With the information on the bullet point above, please provide a photo of the windshield glass build data alongside all other relevant attachments to support the FRED submission.
- Providing the proper information will lead to less back-and-forth dialogue, hence faster approvals for repair.
