 - 21MY+ XF
 - 20MY XE

- There have been several FRED submissions being submitted for concerns of screen delamination on the IDMA and/or ICDM.
- Since **23rd April**, cosmetic defects to the IDMA and ICDM should be handled by running a workflow based on relevant symptom dropdowns.
- As the workflow is run, you will be prompted with a test plan titled “Cosmetic Defect Test.” Please run this test plan.
- If the test plan finds a fault, you will be granted AutoFRED approval and may proceed with repairs.
