Case Number: S251800005

Release Date: May 2025

Symptom/Vehicle Issue: Service Electronic Throttle (ETC) Light Illuminated Or Flashing With No Diagnostic Trouble Codes (DTCs) Setting.

Discussion: A technician may encounter a vehicle with an ETC light illuminated or flashing. There will not be any DTCs setting when this happens. This issue may be seen during Pre-Delivery Inspection (PDI).

This issue may be due to the assembly plant End-of-Line (EOL) registries not being properly set in the Powertrain Control Module (PCM) during assembly. If the technician encounters a vehicle with this concern, over-flash the PCM with the current available calibration. This will reset the module's internal registries and clear the light.

This document does not authorize warranty repairs. This communication documents a record of past experiences. STAR Online does not provide any conclusions about what is wrong with the vehicle. Rather, it captures all previous cases known that appear to be similar or related to the vehicle symptom / condition. You are the expert, and you are responsible for deciding on the appropriate course of action.
