

Grecale - Central rear seat belt locked

DATE: June 9, 2025

In certain Maserati Grecale vehicles, the rear central seat belt may become locked in a partially retracted position if the belt is released suddenly in a lateral direction. Maserati is actively developing a permanent solution to address this issue in future retractor designs.

MODELS AFFECTED: M182 Grecale (All MY).

Service Procedure

Do not pull or force the belt if it is stuck. Instead, follow the steps below to safely release the belt:

1. Removal:

- Refer to the workshop manual to remove the rear central seat belt assembly.
- If the belt is partially extended and will not retract (as shown in the reference photo), do not remove the black cover on the belt.

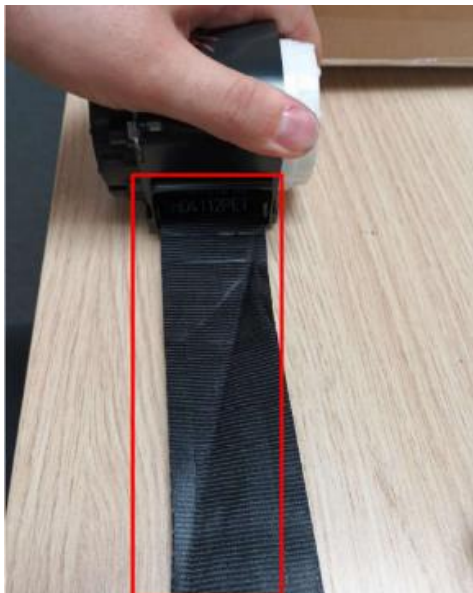

2. Manual Unlocking:

- Gently rewind the belt manually until you reach the locked section.
- Press on the retractor spool in the opposite direction of the lock.
- Using a non-sharp tool such as a thickness gauge, carefully extract the stuck portion of the belt from the retractor.

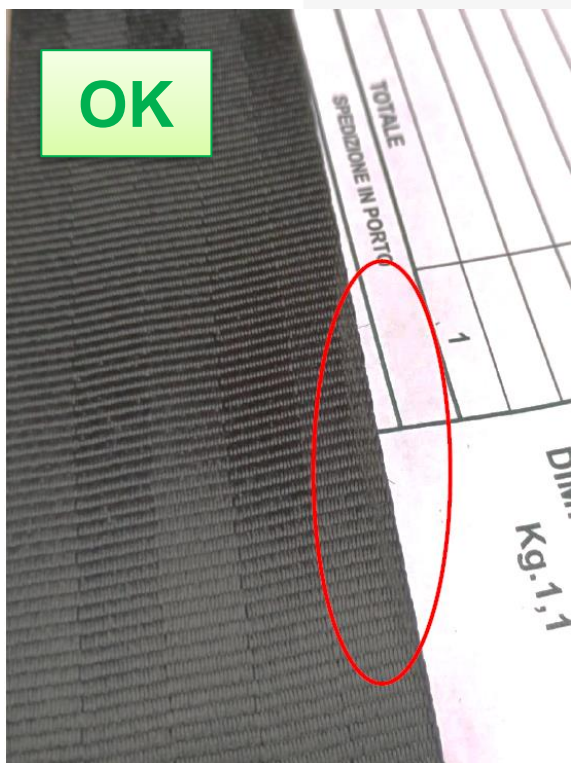

3. Visual Inspection – Twist Marks:

- Fully extend the seat belt and inspect for twist marks.
- If a twist mark is found only at the base (not visible when rewound), replacement is not necessary.
- If the twist is visible when the belt is fully rewound, take a photo and attach it to the BOL report for warranty approval.

4. Visual Inspection – Webbing Damage:

- Check the entire length of the webbing for fraying or damage.
- If any damage is found, photograph the area and include it in the BOL report for warranty authorization.

5. Reinstallation:

- If the belt passes inspection, reinstall it according to the workshop manual.

Warranty Information

Submit a warranty claim using the following codes:

- Component Code: 7.11.003
- Operation Code: 7.11.003.0
- Labor Time: 0.90 hours
- Description: Central Rear Seat Belt Inspection and Correction

Maserati reserves the right to adjust or reject claims that do not meet the requirements outlined in this bulletin.
