

2023-2024 MY Escape

Anti-lock Braking System - ABS

ABS-24.80.6

Priority Update - Parking Brake

Anti-Lock Brake System Control Module

ABS-24.80.6

1

Enhanced Brake Release

"• Your parking brake releases faster when you shift to reverse.

- Maintains the Automatic Vehicle Hold (AVH) settings.
- Provides accurate park brake alerts and prevents false warnings from appearing on your instrument panel.
- After the update, some settings may be reset, potentially causing a check engine light to appear in your vehicle. The check engine light has no impact to your vehicle and will clear after a few drives. No further action is required at this time."
