

SSM 54180 2026 F-Super Duty - Retrieving Factory Keyless Entry Keypad Code

Some 2026 F-Super Duty vehicles may require retrieval of the factory keycode for factory installed wired keyless entry keypads. If Ford Diagnosis and Repair System (FDRS) scan tool retrieval is not available, the code can be retrieved using 2 programmed keys. Perform the following steps within 10 seconds. Place the first programmed key into the ignition lock cylinder or backup starting location and turn the ignition on. Turn the ignition off and remove the first programmed key. Place the second programmed key into the ignition lock cylinder or backup location and turn the ignition on. The factory keycode displays momentarily in the instrument panel cluster message center. Do not submit a warranty claim for this procedure. This procedure is in Workshop Manual (WSM), Section 501-14 > Description and Operation.
