CARBON FIBER RAISED AIR INTAKE ACCESSORY KIT VPLEP0549

Customer Voice:

- The mounting screws do not fit the installed rivnuts in the tubes.

Technical Description:

- A small batch of carbon fiber raised air intake tubes were built with the wrong size rivnut installed (4mm) and the mounting screws (6mm) will not fit.

Status:

- This affects a very small number of VPLEP0549 kits.
- SSM 76372 has been published to address this concern.
- If you encounter any kit tubes with the wrong size rivnuts installed, please contact svhelp@jaguarlandrover.com to obtain the correct rivnuts for the installation.
- **DO NOT** substitute 4mm screws for the 6mm screws, nor replace the rivnut with any generic 6mm rivnut. These are special stainless rivnuts
