Swapping ECU For Diagnostic Purposes - VN (4) - PR (4) - AN (4)

Published 11 September 2025

Valid For

Volvo Chassis - VN (4)

Mack Chassis - PR (4), AN (4)

Model Year - 2025 to current

Overview:

Electronic control units on the VN(4), PR (4) and AN (4) contain information that is critical for vehicle functionality, maintaining vehicle life data, and maintaining vehicle compliance. Because of this, swapping ECUs from truck to truck **even for diagnostic purposes** may cause functional or compliance complications that may or may not be apparent.

Please **AVOID** swapping control units from one truck to another, **especially the VMCU**, which contains the most sensitive vehicle information.

Please use Guided Diagnostics and Case Based Reasoning documents for identifying potential root causes that may be caused by these control units before a new one is ordered.
