Towing

Introducing Tow Mode for Lucid Gravity. Dream Edition and Grand Touring models equipped with the towing package can tow trailers rated up to 6,000 lbs (2,721 kg).

NOTE: Some DreamDrive features may be unavailable while towing a trailer or carrying rear-mounted accessories.

Tow mode - A new drive mode (alongside Smooth, Swift, and Sprint) that adjusts vehicle settings to maximize comfort and control while towing a trailer. Tow Mode is activated automatically when a trailer is plugged in, or can be selected from the drive mode on the Pilot Panel.

Rear Attachment Optimization - Disables rear-facing DreamDrive features when something (such as a bike rack or cargo carrier) is attached to the tow hitch and obstructs the rear sensors. The system can detect some attachments automatically, but can also be manually activated in the DreamDrive settings menu.

Rear Attachment Optimization - Disables rear-facing DreamDrive features when something (such as a bike rack or cargo carrier) is attached to the tow hitch and obstructs the rear sensors. The system can detect some attachments automatically, but can also be manually activated in the DreamDrive settings menu.

Hitch Optimization - Improves the performance of the parking features with a tow hitch attached by accounting for the added length of the hitch. Hitch Optimization must be manually enabled in the DreamDrive settings menu.

Hitch View - An additional option in the Rear View Monitor is now available on vehicles equipped with the towing package.

Integrated Trailer Brake Controller - Gravity is equipped with an integrated trailer brake controller for use with trailers equipped with electric brakes. Refer to the Lucid Gravity Owner's Manual for trailer brake controller setup and operation.

Trailer Light Check - This feature illuminates the trailer's lights in sequence when a trailer is connected, aiding the process of checking the trailer lights before towing. Trailer Light Check can be started from the Lucid Mobile App or from the drive mode menu on the Pilot Panel.

DreamDrive

Posted Speed Update Alert will no longer give a chime. Instead, the system will flash the speed sign on the display as a visual alert.

Cross-Traffic Protection - The warning experience has been enhanced:

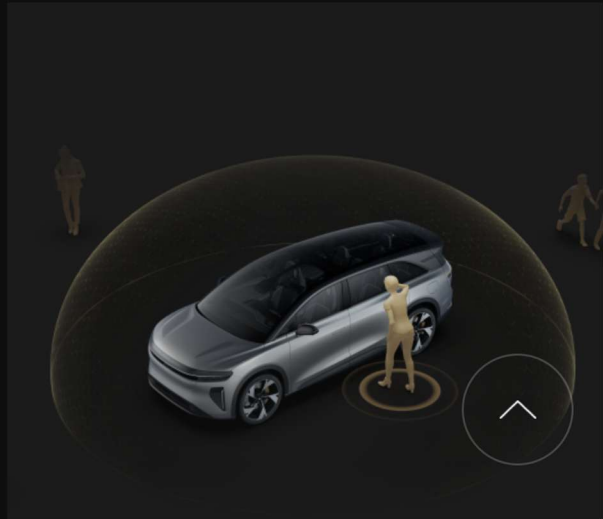

- While stationary, a visual alert notifies of front crossing vehicles.
- While in motion, visual and audible warnings provide awareness of potential hazards.

New Feature: Halo Secure App

The Halo Secure App enhances peace of mind by monitoring the vehicle, detecting and deterring potential threats, and recording incidents when needed.

With Live View, surroundings of Lucid Gravity can be seen in real time through the Lucid Mobile App.

NOTE: This feature is available only in certain regions with specific trims. Also, Live View requires the latest version of the Mobile App.

Drive Recorder automatically captures and saves video clips of important events directly to the vehicle. Events triggering Drive Recorder are user-customizable, except for a crash event, which is always enabled. Additional security features will be delivered via future over-the-air updates.

To enable Drive Recorder, insert a compatible USB 2.0 drive in the port in the glove box. It must have at least 128 GB of storage, write speed of at least 7.5 MB/sec, and read speed of at least 20 MB/sec. USB 2.0 drives that are rated for "high endurance" or "high read/write cycles" often meet these criteria, as they have been developed for constant video recording.

Keys

This software update improves the connection between your key fob and your Lucid vehicle, delivering a smoother, more consistent experience every time you drive. To ensure the highest level of security, part of this update requires a quick in-person service by a certified Lucid technician. This process is brief, complimentary, and can be completed at any Lucid Service Center. To learn more, please contact Lucid Customer Care.

Infotainment

Favorites— Save more than just Home and Work in Navigation. Any destination can now be bookmarked for quick access:

- From the Points of Interest page, tap the Bookmark icon to save a location.
- From the Favorites page, select the 'Add tile' option.

Media Ducking - Navigation prompts and safety chimes will now temporarily lower the media volume in the front row, so passengers in the second and third rows can enjoy a smoother listening

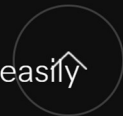

experience.

Phone calls - Improved audio quality makes calls clearer, with reduced echo and background noise.

Audio - Playback quality has been refined for an even richer listening experience.

Energy App – The Consumption Graph now includes two new views: "Since Last Charge" and "Active Route," offering more insightful tracking of energy usage. The range map has been updated to be clearer, easier to read, and more intuitive. Please note that these enhancements require the system to reset the Energy App, meaning prior drive history will no longer be reflected.

Wiper Control - Auto wipers now have three sensitivity levels. Tap AUTO to easily cycle through the settings.

Interior

First Row Courtesy Movement— The courtesy movement now detects passenger presence in the front row and provides a notification to confirm seat movement in both the first and second rows.
