

Y3/8n4 (fully integrated transmission control unit (VGS)) not listed in quick test; no communication possible with VGS

Topic number	LI27.19-N-079793
Version	1
Function group	27.19 - Transmission - electrical system
Date	9/16/25
Validity	907, 906, 447 with 722.9 OR 725.0 transmissions
Reason for change	

Complaint

Transmission control unit Y3/8n4 (fully integrated transmission control unit (VGS)) not listed in quick test and/or no communication possible with VGS.

Cause

Transmission control unit Y3/8n4

Remedy

For vehicles with 722.9 transmission:

Ensure LI54.15-P-057373 is performed before replacing any component parts.

After processing and complying with the above document(s):

1. Perform an ignition reset on Y3/8n4 (VGS)
2. Inspect transmission connector for loose connections, damaged wiring or pins and any other concerns

If communication with the VGS cannot be established, the complete valve body ('electrohydraulic controller unit (EHS)') must be replaced.

Installation of a VGS repair kit is not permitted in this case as it is not possible to transfer the necessary valve characteristics without communication with the original control unit.
