

SSM 54340 2022-2025 F-150 - Intrusion Alarm Activates Without External Source

Some 2022-2025 F-150 vehicles may exhibit a condition where the intrusion alarm will activate without an external source. This may be due to software in the body control module (BCM). Reprogramming or replacing the BCM may not resolve this condition. Inform customers that engineering is currently working on a solution for this condition and it will be released by the end of Q1 2026. Monitor Professional Technician System (PTS) for additional information and schedule service appointments for customers once the repair becomes available.
