

Lucid Gravity OTA v.3.3.5 Updates, Performance Improvements & Optimizations

UPDATES, PERFORMANCE IMPROVEMENTS & OPTIMIZATIONS

This software update enhances overall system stability and reduces instances of false “Key Not Detected” alerts through improvements to the vehicle-side software.

Separately, an updated key fob software version eliminates rare cases where removing and reinstalling the fob battery may have been necessary to restore recognition. To receive this key fob update, please schedule a service appointment, either at a Lucid Service Center or with a Lucid Mobile Service technician who can perform the update at your location.

Additional refinements to key fob connectivity and vehicle access functionality are planned for future releases.
