Title: Winter Grille Cover

Applies To: All Medium and Heavy-Duty International Vehicles (Truck & Bus) Operating in Very Cold Climates.

CHANGE LOG

Please refer to the change log text box below for recent changes to this article:

11/04/2025 - Updating P/N table and Including Canadian Supplier P/Ns and contact info.
01/28/2021 - Updating P/N table and adding photos for each cover available.
03/06/2020 - Updated article layout and current parts list.
02/11/2020- Responded to feedback via email and republished article.
12/23/19- Responded to feedback via email and republished article.
11/19/18- Responded to feedback by email.
11/19/18- Added RH model.
10/08/18- Added notes and comments for gasoline engine.
03/02/18- Changed title and verbiage from Winter cover to grille
02/01/18- Changed Navistar to International
01/19/18- Added notes and comments for A26
7/13/17- Added LT P/Ns

DESCRIPTION

In some geographic areas, ambient temperatures reaching below 15°F (-10 °C), including high levels of humidity, an operator may experience engine stalling, low performance, and or poor aftertreatment performance. This is caused by condensation accumulating and freezing within the Charge Air Cooler (CAC); affecting air flow into the engine. This article lists all the currently available winter front covers that can be installed on the front grille and bumper to reduce cold air flow to the engine compartment.

PROCEDURE

International-approved winter front grille covers should be installed to limit air flow through the cooling module. International-approved refers to any parts that can be purchased through the International parts system. We are currently bringing a Canadian supplier up to speed, and their contact info and P/Ns are not listed in this article. However, their covers are not available through the parts catalog at this time and can be purchased directly from them.

NOTE:

- Engine overheating and damage can occur if the Winter grille & CAC covers are closed when ambient air temperatures are above 35°F (0 °C). To ensure proper engine operation, the covers should be opened or removed when ambient air temperatures exceed 35°F (0 °C).
- Winter grille covers that have large slots and do not cover the bumper opening are not effective in preventing CAC freezing. In extreme cases, when operating below 0°F (-15 °C), it may be necessary to use a cover for the CAC.
- Winter grille covers are ***NOT*** recommended for ***8.8 PSI propane and gasoline-equipped*** buses.
- ***A26-equipped*** vehicles require air flow of **25%** across the cooling package. In extreme cases, engine de-rates will occur due to charge air cooler (CAC) efficiency.

- S13 equipped vehicles require the grill front to be completely covered when the air temperature is -40C or colder when driving on open roads at highway speeds. When operating stop/go in the city or at extended idle periods where the air temp is -40C or higher, cover flaps may need to be opened or removed depending on environmental conditions.

SERVICE PARTS INFORMATION

- Refer to Part Catalog for Availability.

NOTE:

1. These Covers are NOT compatible with High Cab MV(DuraStar) or High Cab HV(WorkStar).

2. Flush-mount bumper assumed for all compatible vehicles.

RECOMMENDATION: When available, shutters should be ordered to automatically compensate for cold temperature operation.

Winter Front Covers for Truck

Part Number	Type	Model	Model Year	Color	Winter Front Kit Description
ZEDWF2219	Truck	RH	2017-2024	White	RH-Hardware Included with Cutouts
ZEDWF2219F	Truck	RH	2017-2024	White	RH-Hardware Included with Flaps

Examples of Properly Fit Winter Front Covers

Not Compatible with High Cab MV(DuraStar) or High Cab HV (WorkStar)

CAC COVER INFORMATION

NOTE:

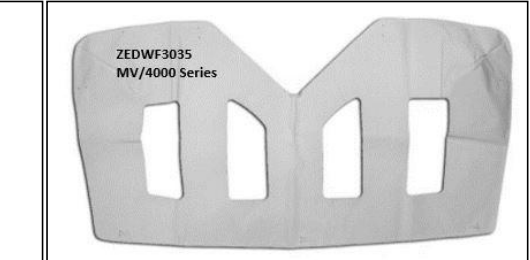

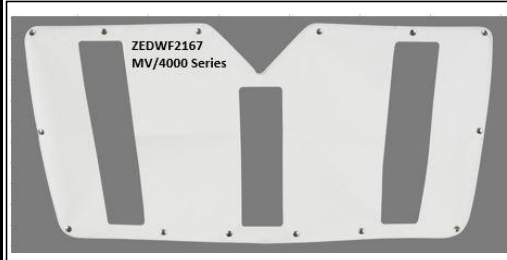

In extreme cases, when operating below 0°F (-15 °C), it may be necessary to use a cover for the CAC.

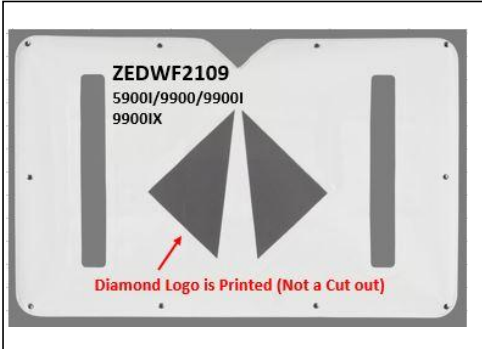

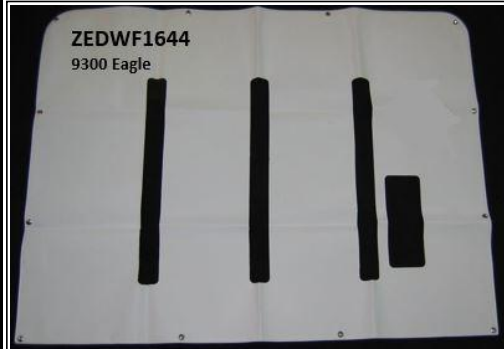

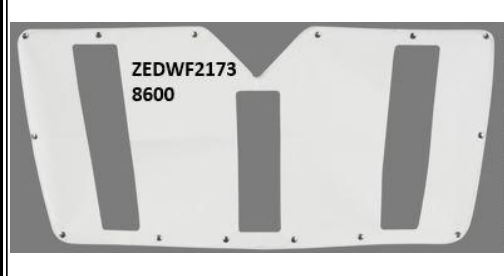

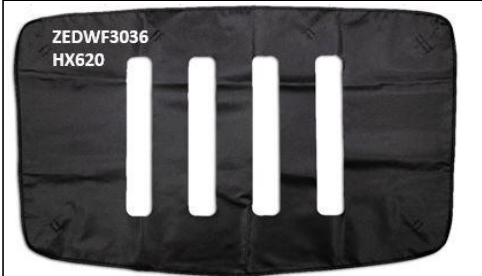

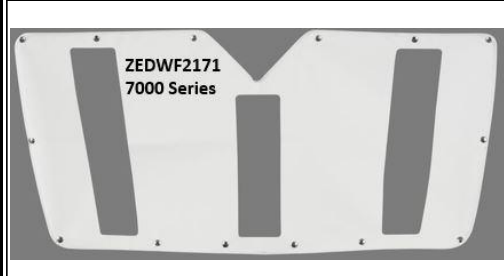

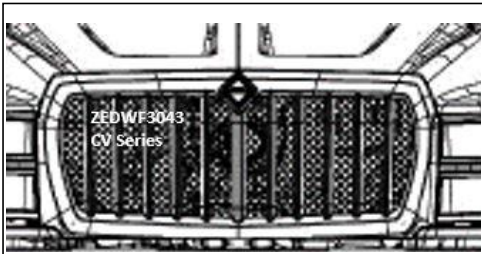

- Covers can be fabricated locally - see example below

CAC Cover Example:

***** WINTER FRONTS FOR TRUCK *****

***** WINTER FRONTS FOR BUS *****
