

SSM 54432 2025-2026 Transit - RWD - Single Rear Wheel - Boom/Hum/Moan Noise From The Rear While Driving At Highway Speeds - Workshop Manual Update

Some 2025-2026 Transit vehicles equipped with rear-wheel-drive (RWD), single rear wheel only, may experience a boom/hum/moan noise from the rear while driving. This noise is most noticeable at highway speeds between 70 and 90 mph (112-144 km/h). This may be due to a harmonic vibration. The Workshop Manual (WSM), Section 205-01 > Diagnosis and Testing > Driveshaft > Symptom Chart NVH > Rumble or Boom has been updated to include diagnostic and repair direction for this concern.
