

Feature Update: Mudflap Hanger Bracket Fixturing

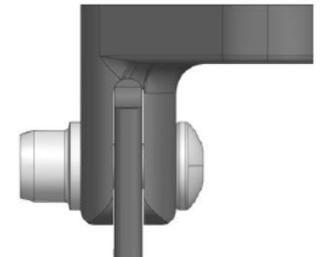

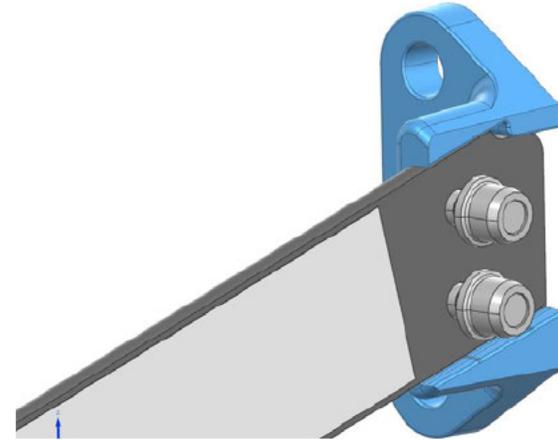

Feature Improved design of mudflap hanger bracket to prevent huck bolts from coming loose/breaking off

Description Prior design - significant part of clamp load goes into deflecting cast bracket to contact the hanger bar. Fasteners may loosen or break over time, requiring field-fix of installing grade 8 3/8" bolts w/ nylon locknut.

New design - bracket redesigned so that the cast ears do not have to be deformed to achieve clamping force on hanger

Expected SoP: Q1-Q2 2026

Fleet: Intermodal spec
