

NFD Lower Oil Fill Plug Location – SP Axles

Feature NFD Lower Oil Fill Plug Location – Standard Performance Axles

Description

- Starting earlier in 2023 we were receiving oil baffles back from replacement carriers and hearing about the fill plugs being reinstalled in the previous orientation.
- Quality/Production created a service tag for our replacement carriers (quality replacement, critical ship, drop ship, Canton, etc.) to help get the word out on our high heat improvements.
- Temporary activity to bring awareness to the recent changes
- The tags have been placed on the carriers for about two months and have now been exhausted
- SB 35-038 and SB35-039 were also published on the subject
- New carriers have the fill plug machining modified on the carrier instead of the axle housing

SB 35-038 and SB35-039 documentation
