**Subject: KT Pacer Triaxle Subframe Update Kit**

**Dear [Customer Name],**

This notification is to inform you of an update kit for the triaxle subframe weldment. KT Pacer has identified the trailer VIN numbers that qualify for this update.

Our records indicate you (or business name listed) as the primary owner of a trailer or trailers with a qualifying VIN number. A KT Pacer representative will be contacting you to schedule our technician to come on-site to install the update.

**Qualifying VIN:**

**Background:**

KT Pacer has determined there is a potential for minor cracking to develop at, or along the weld area at the front driver and passenger side rails of the triaxle subframe. Any visible cracking will not lead to a catastrophic failure, however if left unattended the cracking may continue to progress and reduce the usable life of the subframe.

**Solution:**

A weldment kit has been designed to provide additional re-enforcement in the affected areas. KT Pacer will contact the owner(s) to schedule a repair time for a factory technician to come on-site and install the update. Any visible cracks in this area will be repaired by the technician before installing the re-enforcement kit. If it is determined the unit cannot be updated on-site, a time will be scheduled to have the unit brought back to KT Pacer's facilities to complete the update.

We value your business and appreciate your cooperation to schedule a time to have the subframe update and repairs completed. Should you have any questions regarding this notification, please contact your sales representative or our office at 319-396-7336 ext.2

Sincerely,

Carl Kirpes  
President, KT Pacer
