

Wiring/Airing Routing and Clipping

Topic Background:

1. Many customer/dealer complaints for poor routing of airlines and wire harnesses causing rubs and premature failures/breakdowns

Progress Updates:

1. These complaints are consistent with plants not following routing and clipping guidelines.
2. Plants need to set up a final routing and clipping quality check before trucks are released.
3. Feedback can then be given to the OUs responsible to drive proper problem solving.
4. Regular training of the standards for employees to raise awareness is also needed.

Topic Resolution Info:

1. TBD
