Involved Region or Country	North America
Condition	Top End Ticking Noise.
Cause	Manufacturing debris inside the Stationary Hydraulic Lash Adjuster (SHLA) and not allowing it to pump up with oil, resulting in a soft lash adjuster.

Correction

Verify the ticking noise is from the valvetrain area by using a stethoscope or other methods.

Remove the camshaft carrier and inspect for soft stationary hydraulic lash adjusters by pushing down on each of the followers / rocker arms where it rests on the lash adjusters / SHLA.

Check all of them on intake and exhaust sides.

Replace any soft lash adjusters and the follower it operates.

The video below is an example of a stationary hydraulic lash adjuster / SHLA that is soft .
