

Delivery STOP610032 has been released for multiple models

Turn Indicator Cancelation

HI Dealer Personnel,

A delivery stop has been announced for multiple models produced between 01-12-2026 and 1-28-2026.

During a quality inspection it was discovered that the turn indicator cancelation could unintentionally activate while initiating the turn signal. As a consequence, the turn indicator may reset itself upon activation.

Potentially affected vehicles are flagged in AIR (Aftersales Information Research) with campaign code STOP610032. Please note, open campaigns or vehicle stops may not appear in DCS Warranty Vehicle Inquiry or sales systems until 24-72 hours after they are announced, therefore AIR is always the recommended method for determining open campaigns and vehicle stops.

All affected units are either in transit to the VDC or have not been shipped. No affected vehicles are currently in dealer inventory.

Next steps are being determined and a bulletin with technical measures will be published once information is available.
