

Fifth Wheel Leg Height Changes

Communication Type: Retail Sales Information

Date: 2/4/2026

Beginning with chassis start date of 3/23/26 and later, all tractor fifth wheel leg heights will be adjusted so that the specified leg heights will match the actual height in the supplier part number. These changes will not affect the actual fifth wheel in any way, but may change the calculated height of the fifth wheel in the spec. No adjustment is expected to exceed +/- 0.5".

If this is a recurring spec, the fifth wheel will be identical and that can be communicated to the customer.

If this is a new spec, and the delivered fifth wheel height is critical, the dealer should review.

SpecPro will be updated to reflect these required changes, but it may take a few weeks for all of the changes to be updated.

Please reach out to your CAE sales coordinator with questions.
