#### Software Update - Plug & Charge Improvements

#### Off-Board Charger Control Module

"The BlueOval Charge Network is North America's largest integrated public charging network. Ford combines multiple charging networks to give all-electric vehicle owners simple and easy access to public charging via the Ford App. Through the BlueOval Charge Network you can find which charging stations are available, check the charging cost, and pay for charging seamlessly. For more info, visit:

#### OBCC-AS.AU

"This software update contains the following key changes:

- We're updating your vehicle's Plug & Charge functionality to keep everything running smoothly when connecting to a public DC fast charger.
- In some instances after this update, a ""Service vehicle soon"" wrench icon may appear in your instrument cluster and will remain visible until you dismiss it by pressing the ""OK"" button on your steering wheel, or it will clear automatically with the next ignition cycle. You may also receive a Ford App notification indicating service is needed on the vehicle, which you can disregard. Please be assured this is a visual notification only and does not indicate any functional impact on your vehicle."
