

SSM 54690 2013-2016 F-Super Duty, 2015-2019 Transit - 6.7L/3.2L Diesel – Will Not Pass State Smog Inspection – EGS Monitor Will Not Complete

Some 2013-2016 Super Duty vehicles equipped with a 6.7L diesel engine and 2015-2019 Transit vehicles equipped with a 3.2L diesel engine may not pass a state smog test due to the exhaust gas system (EGS) monitor that will not run after completing the Exhaust Gas Sensor drive cycle located within Section 2 of the Powertrain Control/Emissions Diagnostics (PC/ED) Manual > Drive Cycles. This may be due to the vehicle's diesel oxidation catalyst (DOC) age counter being under the 120-minute requirement. Engineering is investigating this issue and working on a solution. If assistance is needed prior to the solution becoming available, contact the technical assistance center (TAC) as needed. Note: this article only applies to the EGS monitor. Problems with other vehicle monitors not running successfully must be addressed using normal diagnostics located in the PC/ED.
