[Advanced Driver Assistance System \(ADAS\)](#)

This software release enhances the way your mobile device works in unison with your Lucid Gravity. Now offering **Apple CarPlay® (NEW)** and **Android Auto™ (NEW)**. Connect your iPhone® or Android™ device to the Lucid Gravity with enhanced usability. Expect your phone calls to be crystal clear with the implementation of our new **Voice Engine (NEW)**. **Remote Start (Keyless Driving) via Mobile App (NEW)** allows you to drive without the need for a key by activating from your mobile app.

This release also includes a broad set of improvements across the entire infotainment, connectivity, media, and vehicle control stack.

NEW - Apple CarPlay and Android Auto

- With the Lucid Infotainment system, you can connect your iPhone or Android device your way. Apple CarPlay¹ and Android Auto² compatibility are now available in Lucid Gravity, making all your messages, maps, and on-the-go moments accessible to you with ease.
- For instructions on connecting Apple CarPlay or Android Auto, visit the Lucid Knowledge Center or watch the Learning Series on YouTube.

For a seamless first-time experience, please remove (forget) the previously connected devices and re-pair them again to connect to CarPlay or Android Auto.

NEW - Voice Engine

- This update introduces our new machine-learning-powered voice engine, delivering dramatically clearer voice quality to the people you call. By intelligently isolating your voice from background noise, it allows your speech to come through cleanly and naturally.

NEW - Remote Start (Keyless Driving) via Mobile App

- This update introduces Remote Start (Keyless Driving) for Gravity vehicles. When activated from the Lucid Mobile App, a two minute timer starts. The vehicle will unlock – driver door handle must be pushed in, so it deploys out allowing the door to be opened. The vehicle can be driven without a physical key. If driving does not begin within two minutes, Remote Start (Keyless Driving) must be re-initiated from the Lucid Mobile App.

Requires Lucid Mobile App version 2.14.0 or later. For the most reliable experience, please continue to carry your Key fob and/or Key card, since this feature is dependent on network connectivity.

Charging Updates

- An update to **Smart Preconditioning** improves charging performance and reduces charging times at DC charging stations.
- Charging is now smoother at select DC stations. Your vehicle is more likely to start charging on the first try; no more unplugging and plugging back in.
- Your AC outlets remain active during DC fast charging, reliably keeping your devices powered, even on hot days.

HVAC System

- Improved HVAC airflow distribution for better windshield fog management in cold weather.
- Consistent HVAC system operation: Improved startup reliability of Active Grill Shutter (AGS).

Navigation & Maps

- Improved turn-by-turn guidance synchronization across displays.
- Updated trip completion and dismissal behavior.
- Improved route deviation handling.

Wipers

- Updated auto-wipe tuning for improved consistency.

Media

- Improved synchronization of playback state, metadata, album art, and queue information across all displays.
- SiriusXM stability improvements ensure reliable playback during connection variations. The system also handles post-phone-call behavior better.
As a result of this update, your saved SiriusXM favorites and listening history may be cleared. Once the update is complete, you may need to re-save your SiriusXM favorites.

Live View

- Live View is now more reliable across a wider range of conditions.
- Live View is now accessible while charging (unoccupied) and in Flatbed Transport Mode.
- Live View now displays vehicle connectivity strength while on Wi-Fi for improved awareness.
