

## Summary

### **Feature Upgrade:**

- **Feature Upgrade: Smart Opener**
- **Feature Upgrade: Proactive Navigation Powered by AI**
- **Feature Upgrade: Navigation Shows all Available Lanes**
- **Feature Upgrade: Parking Assistant Plus**

### **Quality improvement & Service Task:**

- **Quality Improvement: General Quality and Error Correction**
- **Quality Improvement: Vehicle Software**

### **Notes on Remote Software Upgrade**

**This Remote Software Upgrade updates existing functions to the latest technical standards. New features depend on your installed equipment, which you can review in your BMW Owner's Manual, at your service center, or through BMW ConnectedDrive Customer Relations.**

**The update automatically refreshes installed BMW ConnectedDrive apps and the Integrated Owner's Manual. Be aware that control messages may appear due to system restarts, such as powertrain malfunctions. If these messages persist on subsequent trips, contact your service center.**

**For BMW Plug-in Hybrids and electric vehicles, charging processes might be interrupted and not automatically resumed if you update while charging. Note that unapproved conversions, retrofits, engine tuning, or special coding may be lost or cause issues due to the upgrade. BMW of North America, LLC and service centers are not liable for any resulting damage. After installation, privacy settings may revert to factory defaults, so check and adjust them as needed. Remember, driver assistance systems do not replace your responsibility while driving.**

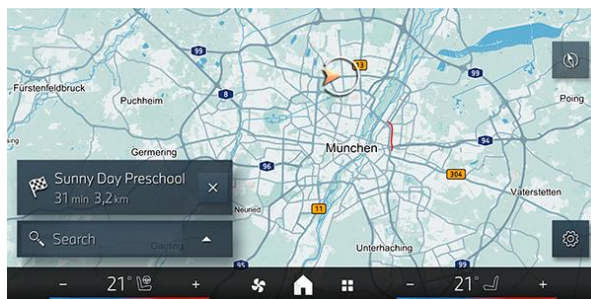

## Feature Upgrade: Smart Opener

After this update, your BMW will respond more precisely to your foot kick under the cargo area and open the tailgate even more reliably. Simply move your foot dynamically back and forth at the center of the bumper, then place it back down. Your BMW flashes to confirm, and the tailgate opens automatically. The Kick-to-Open feature works when your Digital Key or vehicle key is with you.

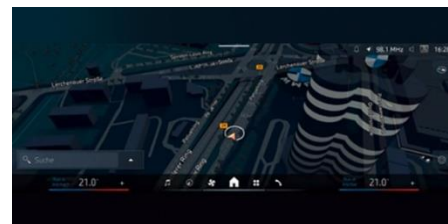

## Feature Upgrade: Proactive Navigation Powered by AI

Proactive Navigation now uses AI to more accurately identify frequently visited destinations and suggest them automatically. It can also recommend helpful intermediate stops—such as your usual coffee stop on the way to work. With a single tap, you can add these suggestions to your route. If a departure reminder is activated in the My BMW App, you'll receive even more detailed recommendations.

## Feature Upgrade: Navigation Shows all Available Lanes

The visualization of navigation in BMW Maps is now even more detailed, showing available lanes and direction of travel such as turning lane. This feature will be added soon to the separately bookable BMW Digital Premium package.

### Feature Upgrade: Parking Assistant Plus

The enhanced functionality of the Automatic Park Assistant improves parking space recognition, making partially automated parking even easier. The feature will become available shortly after the update.

### Quality Improvement: General Quality and Error Correction

This software update brings your BMW up to date, rectifies errors and prevents security gaps, for an improved driving experience. This update is recommended for everyone.

### Quality Improvement: Vehicle Software

This update enhances overall system performance and stability, with additional optimizations for connectivity and apps. Enjoy a more reliable connection and an even smoother user experience.
