

Subject

Exposed Accessory Power Port/Tire Inflator Connector Cover

Market

USA

Service Category

General

Section

Outline-General

Applicability

MY 24-26 Tacoma

APPLICABLE VEHICLES

2024-2026

Tacoma

CONDITION

Exposed connector ("dummy") cap under LH rear of truck bed.

RECOMMENDATIONS

The condition above is design intent for vehicles equipped with an accessory Power Port or Tire Inflator.

During the installation process of the Power Port or Tire Inflator, the pre-wire connector is removed from the dummy cap (which is attached to the harness) and is left attached when power is connected. The purpose of the dummy cap is to prevent connector water intrusion/corrosion when the accessory is not installed.

Harness prior to accessory install.

Top view of dummy cap and pre-wire.
