

Detroit Assurance Front Radar Harness Extension

What is it?

The new Detroit Assurance front radar harness extension option provides 60 inches of harness length for the front radar, regardless of bumper selection or front frame extension (FFE) configuration.

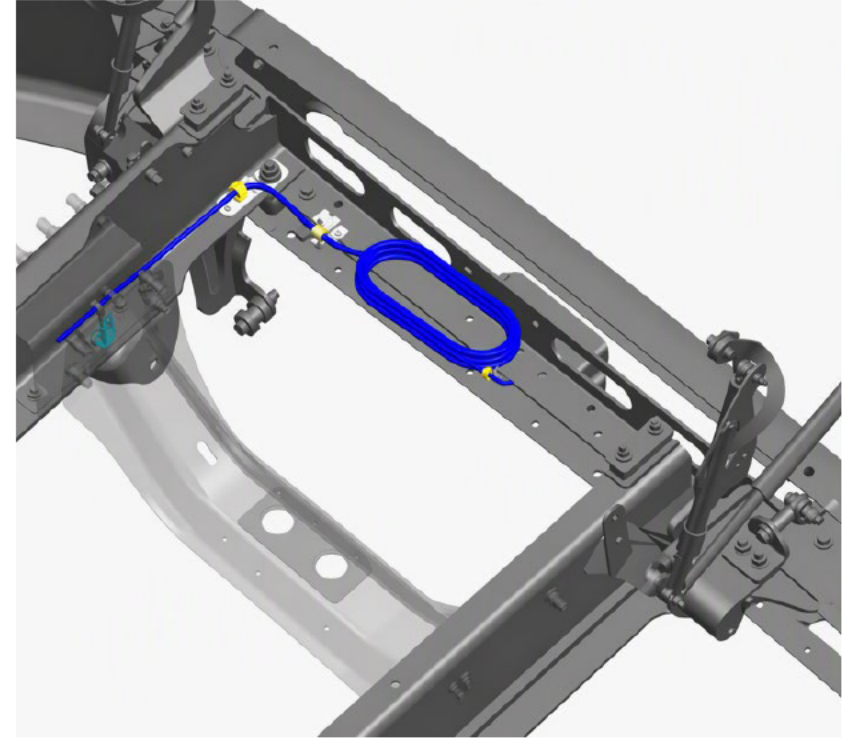

The Plus Series will continue to include a standard radar harness length tailored to vehicle specifications, including bumper configuration and FFE. For customers requiring additional radar relocation capability due to body equipment or specialized applications, a new extended-harness option is now available.

Detroit Assurance Front Radar Harness Extension

Why is it important?

The front radar harness extension provides 60 inches of wiring, providing greater flexibility for radar placement. It simplifies radar relocation for body installations, bumper modifications, and vocational upfits while supporting proper Advanced Driver Assistance System functionality.

Detroit Assurance Front Radar Harness Extension

Key Features:

- New Detroit Assurance option provides 60 inches of front radar harness length.
- Enables greater flexibility for front radar relocation in vocational applications.
- Vehicles not ordered with option 72N-001 will receive the standard radar harness associated with the selected bumper and FFE configuration.

Affected models: M2 106 Plus, 114SD Plus

Data Codes:

72N-001	EXTRA HARNESS LENGTH FOR FRONT RADAR RELOCATION	

Compatibility Considerations: Compatible with all bumpers (including no bumper) and all FFE options.
