

Lucid Air OTA v2.10.0

Release Summary

Note: Before installing the update, unplug the vehicle from charging.

In this update, we are delivering meaningful improvements across privacy controls, everyday usability, and system reliability to make your in-car experience clearer, safer, and seamless. We are also enhancing in-vehicle monitoring to provide early service alerts and help prevent potential loss of drive power.

Release Details

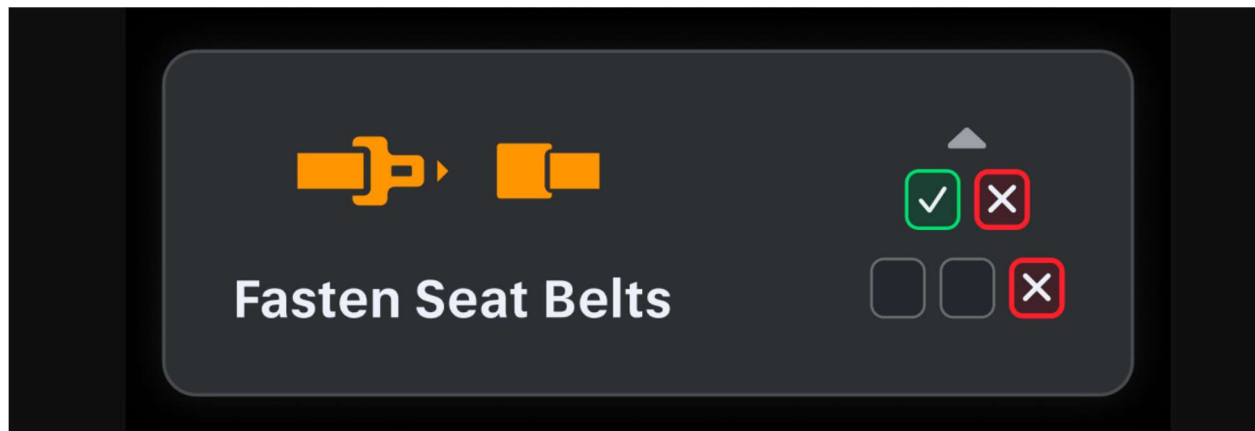

Updated consent and data privacy experience

You now have greater control over data privacy with the option to disable location sharing, while features that use data remain active.

Note: When location sharing is turned off, features that rely on location information will be unavailable.

Enhanced safety notifications

Refined seat belt visuals deliver clearer, intuitive status cues, making it easier to confirm occupant safety at a glance.

Camera experience refinements

Manually opening the camera view in your vehicle is now reliable and consistent.

Smart Energy improvements

Your current limiter preferences remain reliably preserved, ensuring a consistent charging experience.

Drive Unit Service Notification update

We have enhanced in-vehicle monitoring to detect conditions that may affect drive unit performance. If a relevant condition is identified, you will receive a **Schedule Service Immediately** notification advising you to arrange service as soon as possible. Prompt action is important to help prevent potential loss of drive power.

While this update was initially developed for specific configurations, the detection logic has been extended to additional vehicles to provide broader protection and earlier identification of potential issues.
