

Gravity 3.6.3 OTA v3.6.3

Release Summary

Note: Before installing the update, unplug the vehicle from charging.

This software update delivers essential reliability, safety, and convenience improvements to your Lucid Gravity. It enhances rear cabin comfort and door access experience.

Release Details

Enhanced Rear Cabin Comfort

- Rear passengers now enjoy smarter, more consistent comfort. Rear climate activates more consistently when a passenger is detected or a seat belt is buckled in the second or third row.
- On equipped vehicles, turning on rear climate will always enable third-row airflow.
- Rear climate power state (On/Off) is remembered across drives, so passengers are comfortable from the moment they get in.

Faster, Responsive Door Unlock

With optimized door control logic, the exterior door handle opens the door faster, allowing quicker entry into the vehicle.

Reliable Driver Assistance

- Improved driver assistance system stability to reduce unexpected disengagements and fault conditions.
- Refined Attention Alerts — Alerts clear promptly when the driver is engaged, reducing unnecessary interruptions for a seamless experience.

Your Key Fob, More Dependable

We have improved the reliability and responsiveness of the key fob. It automatically recovers if it becomes unresponsive. To reset it manually, hold the lock button for 5 seconds. To enable these improvements, update the key fob to firmware version 2.35.13 using the Lucid Mobile App.

Quality and reliability improvements

Surround View now renders cleaner, more reliable visuals.
