Battery Certificate Service Restoration

Preconditions for Battery Certificate Generation

DATE: August 18, 2026

Dear Partners,

Effective August 4, 2026, the Battery Certificate service will be restored and made available for eligible vehicles. This communication explains the vehicle preconditions and the customer charge/discharge cycle needed before a Battery Certificate should be requested.

To support an accurate battery health assessment and successful certificate generation, all prerequisites below must be completed before submitting the request. Dealers should verify the applicable software campaign status, explain the self-learning cycle to the customer, and confirm the required waiting period has elapsed.

1. Eligibility at a Glance

A Battery Certificate can be issued only when the applicable vehicle has reliable battery usage data available. Confirm each item below before starting the certificate request.

Criteria	Grecale Folgore	GranTurismo / GranCabrio Folgore
Mandatory software campaign	Campaign 822 completed	Rapid Update 823 completed
Auto-learning cycle requirement	See Section 3	See Section 3
Elapsed time after software update	3 months	3 or 6 months, based on production date

2. Required Software Campaign Completion

Before requesting a Battery Certificate, verify in ModisCS+ that the applicable software action has been completed and has not been previously missed or left open.

- **Maserati Grecale Folgore:** Customer Service Notification / Campaign 822.
- **Maserati GranTurismo Folgore and GranCabrio Folgore:** Rapid Update 823.

Important

Completing the applicable software action is required, but it does not by itself make the Battery Certificate available. The vehicle must also complete the required battery usage cycles and the required data acquisition period.

3. Customer Charge/Discharge Cycle Requirement

After the applicable software campaign is completed, the vehicle must complete at least three valid high-voltage battery usage cycles. These cycles may be completed during normal vehicle use and do not need to be completed in one day.

What counts as one valid cycle

One valid cycle is a high-voltage battery charge or discharge event that meets all of the conditions below:

- The charge or discharge event must represent at least a 56% State of Charge (SOC) change.
- For a charging event, the SOC should start from a value higher than 10%.
- For a discharge event, the SOC should remain higher than 10% after the discharge phase.
- The event must be preceded by the applicable resting period.
- The event must be followed by the applicable resting period.

Customer-friendly explanation

The 56% SOC change may be reached cumulatively through multiple charging and/or driving events, typically within one week of normal use. The three required cycles may be completed over several days.

4. Resting Period Requirements

The resting period allows the vehicle to collect stable battery data before and after the charge/discharge event. Apply the resting period that matches the vehicle model and, for Grecale Folgore, the battery temperature.

Grecale Folgore

For Grecale Folgore, use the battery temperature at the time of the charge/discharge event to determine the required resting time.

Battery temperature	Required resting time
-30°C (-22°F) or below	4 h
Above -30°C (-22°F) to -15°C (+5°F)	3 h
Above -15°C (+5°F) to 0°C (+32°F)	2 h
Above 0°C (+32°F) to 25°C (+77°F)	1 h
Above 25°C (+77°F) to 50°C (+122°F)	0.5 h (30 min)

GranTurismo Folgore / GranCabrio Folgore

Vehicle	Required resting time
GranTurismo Folgore	1 h
GranCabrio Folgore	1 h

5. Vehicle Key ON Validation After Sleep Time

After the required sleep/resting time has passed, perform a Key ON and confirm that both the battery temperature and SOC values are within the following ranges before proceeding:

- **Battery temperature:** 10°C < T < 45°C.
- **State of Charge:** 10% < SOC < 100%.

6. Required Waiting Period After Software Update

The software campaign completion and the three battery usage cycles do not automatically qualify the vehicle for Battery Certificate generation. A minimum data acquisition period must also elapse after the applicable software update is completed.

GranTurismo Folgore and GranCabrio Folgore

- **Vehicles produced on or after January 1, 2024:** Battery Certificate generation is available only after 3 months from the software update completion date.
- **Vehicles produced before January 1, 2024:** Battery Certificate generation is available only after 6 months from the software update completion date.

To determine the production date, use the date shown in the Vehicle Database Inquiry section of ModisCS+. Refer to the Body-Chassis assembly date field.

Grecale Folgore

- **All applicable Grecale Folgore vehicles:** Battery Certificate generation is available only after 3 months from the software update completion date.

This waiting period allows the vehicle to collect sufficient battery operating data for a reliable and representative assessment of high-voltage battery State of Health.

7. Dealer Checklist Before Submitting the Request

Before submitting a Battery Certificate request, complete the checks below:

1. Verify that the applicable software campaign has been completed.
2. Confirm that at least three valid battery usage cycles have been completed using the criteria in this bulletin.
3. Confirm that the applicable waiting period has elapsed after the software update completion date.
4. For GranTurismo Folgore and GranCabrio Folgore, confirm whether the vehicle was produced before or on/after January 1, 2024, using the Body-Chassis assembly date in ModisCS+.
5. Proceed with the Battery Certificate request using the standard service tools only after all prerequisites are met.

8. Important Notes

- If a Battery Certificate is generated before the prerequisites are met, the battery health parameter may not accurately reflect the actual high-voltage battery condition and may affect the validity of the certificate results.
- If there are any questions regarding vehicle eligibility or completion of the required conditions, contact Maserati Technical Assistance through BOL before submitting the Battery Certificate request.

We remain at your disposal for any further clarification.
Thank you for your cooperation.

Kind regards,

TECHNICAL SERVICE OPERATIONS
