2022-2023 GMC Sierra 1500
2023 GMC Terrain
2022 GMC Yukon/Yukon XL

On July 15, 2026, GM released Emissions Recall N262558690. As part of the phased launch strategy, the recall population was expanded on August 12, 2026, to include additional VINs.

GM has since identified certain 2022-2023 model year Chevrolet Silverado 1500 and GMC Sierra 1500 vehicles that were erroneously included in this recall and are not affected by the condition. These VINs have been removed from the Investigate Vehicle History (IVH) system and are listed in the attached document.

Investigate Vehicle History (IVH) in the GM Global Warranty Management system MUST always be checked to confirm vehicle involvement and MUST be in OPEN status prior to beginning any required inspections and/or repairs.

Please review your records for any upcoming service appointments involving the affected VINs identified in the attachment. Dealers should contact these customers and advise them that their vehicle was incorrectly included in the recall population and that no further action is required.

GM will begin notifying affected customers of this correction shortly. We apologize for any inconvenience this may have caused and appreciate your assistance in ensuring impacted customers receive timely and accurate information.
