

WTH1 Over-the-Air (OTA) Update - Re-programming high-voltage central box (JX6)

WTH1 Over-the-Air (OTA) Update - Re-programming high-voltage central box (JX6)

ID Number	WTH1
Model(s)	Macan Electric (XAB)
Model Year(s)	2026
Issue Description	Optimized software is available for the high-voltage central box control unit (JX6). This update optimizes the charging process of the affected vehicles to ensure reliable charging at wall boxes and public charging pedestals at all times.
What should Porsche Centers do?	Please note that this software update is only installed over-the-air. No proactive programming with the Porsche Tester is planned for vehicles for which the prerequisites of an over-the-air software update are not met (online software update deactivated in MyPorsche/Privacy Mode activated/Connect main user not logged in). These vehicles will receive this update as part of the next composite update. Please note: In rare cases and under certain preconditions (e.g. charging timer active, utilization of the MyPorsche app etc.), there is a possibility that this OTA update cannot be processed in the vehicle. In this case, the update is unavailable to the respective customer. In this case, this update can only be installed as part of the next composite update.

In the event of any related queries, please inform your customers accordingly as to why an OTA update is not visible in some cases.

Parts Status

Status 0 - No Parts needed.

OTA

Display in vehicle

On affected vehicles, the pending OTA software update appears in the "Updates" menu on the central display of the Porsche Communication Management (PCM).

The prerequisites for a successful update are:

Deactivate parking pre-climatization. Activate the P button next to the selector lever. Press the power button (with the driver's door closed) to stop driving readiness. Start the installation in PCM. Leave and lock vehicle to start the installation.

Warranty processing

Scope 1: Over-the-Air (OTA) software update via PCM - no invoicing possible
