

TECHNICAL SERVICE BULLETIN

Harsh Shifts Between 3rd And 5th Gears And/Or Harsh Reverse Engagement, Symptoms Worse When Cold

26-2408

16 September
2026

This bulletin supersedes 26-2309. Reason for update: update the Model section to remove Aviator 10R80, update the Parts list to add 3.3L to W520514-S440, and add L1MZ-7Z490-G valve body separator plate for Aviator.

Model:

Ford 2022-2024 Expedition	Built on 16-Aug-2022 and through 23-Sep-2024 Transmission: 10R80
2022-2024 Explorer	Built on 16-Aug-2022 and through 23-Sep-2024 Transmission: 10R80 / 10R80 MHT
2022-2024 F-150	Built on 16-Aug-2022 and through 23-Sep-2024 Transmission: 10R80 / 10R80 MHT
2022-2024 Mustang	Built on 16-Aug-2022 and through 23-Sep-2024 Transmission: 10R80
2022-2023 Ranger	Built on or after 16-Aug-2022 Transmission: 10R80
2022-2024 Transit	Built on 16-Aug-2022 and through 23-Sep-2024 Transmission: 10R80
Lincoln 2022-2023 Aviator	Built on or after 16-Aug-2022 Transmission: 10R80 MHT
2022-2024 Navigator	Built on 16-Aug-2022 and through 23-Sep-2024 Transmission: 10R80

Markets: North American markets only

Issue: Some of the vehicles listed in the Model statement above may exhibit at least one of the following conditions:

- Harsh 3-4, 4-5 upshifts
- Harsh 5-3, 4-3 downshifts
- Harsh reverse engagements

These symptoms may be worse when cold. This may be due to the F clutch friction plates brinelling into the clutch and planetary container cylinder (7B177).

Action: For vehicles that meet all of the criteria in the Issue and Model statements, follow the Service Procedure to replace the F clutch steel plates, the F clutch friction plates and the clutch and planetary container cylinder (7B177).

NOTE: All other parts/lubricants/fluids required by the WSM or instructed by the WSM to inspect and replace as necessary should be claimed outside of this article.

Claim Quantity refers to the total number of individual pieces required to repair the vehicle. This may differ from the number of service part number packages due to the unit of issue (UOI).

As Needed indicates the part is necessary but amount of the part may vary and/or is not a whole number. Parts can be billed out as non-whole numbers, including less than 1.

Only If Necessary indicates the part is not mandatory. Refer to the Service Procedure to determine the inspection/inclusion criteria.

Repair/Claim Coding

Causal Part:	7B177
Condition Code:	01

Service Procedure

1. Remove the transmission fluid filter. Refer to WSM, Section 307-01.
2. Inspect the top side of the transmission fluid filter for gray silt. (Figure 1).

Figure 1

3. Is there gray silt present on the top side of the transmission fluid filter as shown in Figure 1?

- (1). Yes - proceed to Step 4.
- (2). No - this article does not apply. Refer to WSM, Section 307-01 for normal diagnostics.

4. Install the transmission fluid pan and bolts.

NOTE: It is not necessary to torque transmission fluid pan bolts at this time.

5. Remove the transmission and mount the transmission to the bench. Refer to WSM, Section 307-01.

6. Remove the main control valve body. Refer to WSM, Section 307-01.

7. Overhaul (clean and inspect) the main control valve body. Refer to WSM, Section 307-01.

8. Disassemble the transmission. Perform only the necessary steps to remove the clutch and planetary assembly from the transmission case. Refer to WSM, Section 307-01.

(1). It is only necessary to remove the following components:

- Transmission fluid pan
- Transmission fluid pump
- Transmission fluid auxiliary pump (if equipped)
- All 4 speed sensors (intermediate speed sensor A [ISSA], intermediate speed sensor B [ISSB], TSS and QSS)
- Torque converter or hybrid drive unit (HDU)
- Front support assembly
- Clutch and planetary assembly

9. Disassemble the clutch and planetary assembly. Perform only the necessary steps to remove the clutch and planetary container cylinder, the CDF clutch cylinder and the No. 3 sun gear shaft and No. 2 ring gear assembly from the clutch and planetary assembly. Refer to WSM, Section 307-01.
- (1). It is necessary to remove the A clutch assembly, the selective shim and T3 thrust bearing, remove and discard the 5-input shaft front seals.
- (2). Remove the No. 1 planetary carrier snap ring and remove the clutch and planetary container cylinder. Remove the No. 4 ring gear snap ring and the No. 4 ring gear from the clutch and planetary container cylinder. Discard the clutch and planetary container cylinder. Refer to WSM, Section 307-01.
- (3). Remove the E clutch and input shaft assembly, the No. 3 planetary carrier and No. 3 sun gear, the No. 3 sun gear shaft and No. 2 ring gear assembly. Refer to WSM, Section 307-01.
10. Remove and discard the sun gear No. 3 shaft seals. Refer to WSM, Section 307-01.
11. Install the 4 new sun gear No. 3 shaft seals. Refer to WSM, Section 307-01.
12. Remove and discard the F clutch steel plates and friction plates from the CDF cylinder. Refer to WSM, Section 307-01.
13. Install new F clutch steel plates and friction plates into the CDF clutch cylinder. Refer to WSM, Section 307-01.
14. Perform the F clutch pack endplay measurement for proper clearance. Refer to WSM, Section 307-01.
15. Remove and discard the input shaft-to-sun gear No. 3 shaft seals. Refer to WSM, Section 307-01.
16. Install the 5 new input shaft-to-sun gear No. 3 shaft seals. Refer to WSM, Section 307-01.
17. Remove and discard the input shaft Teflon seal. Refer to WSM, Section 307-01.
18. Install the new input shaft Teflon seal. Refer to WSM, Section 307-01.
19. Install the 5 new input shaft front seals. Refer to WSM, Section 307-01.
20. Install the No. 4 ring gear and snap ring into a new clutch and planetary container cylinder. Refer to WSM, Section 307-01.
21. To reassemble the clutch and planetary assembly, reverse the disassembly procedure. Refer to WSM, Section 307-01.
22. Reassemble the transmission. Refer to WSM, Section 307-01.
23. Install the transmission. Refer to WSM, Section 307-01.
24. Perform an adaptive learning drive cycle. Refer to WSM, Section 307-01.

NOTE: Advise the customer that this vehicle is equipped with an adaptive transmission shift strategy which allows the vehicle's computer to learn the transmission's unique parameters and improve shift quality. When the adaptive strategy is reset, the computer will begin a relearning process. This relearning process may result in firmer than normal upshifts and downshifts for several days.
